Most significantly stressed: Thyroid & Thymus, Spleen, Gallbladder

We scan 58 points to create the energetic system performance. There are a number of systems in which energetic stress was found as you can see from the chart above. In addition to the three most significantly stressed points listed above, the following points of the body are also driving some of these systems down: **Pituitary & Pineal**

Glands, Sinuses, Joints, Hypothalamus, Adrenal Glands, Throat & Tonsils, Skin, Stomach, Small Intestine, Liver, and Cellular Metabolism.

Energetic Toxins

You were scanned against resonating heavy metals, bacteria, viruses, molds, parasites, and chemicals. Below are those that were found, energetic in nature, which simply means there was a match to the bioenergetic pattern of that category. **These are resonating toxins, meaning an energetic exposure to that toxin pattern. Please do not interpret this as a diagnosis or as medical advice.**

Bacteria

- A resonating bacteria often transmitted by ticks, fleas, or mosquitos.
- A resonating bacteria often transmitted from person to person, or through droplets in the air when an infected person coughs or sneezes.

Chemicals

- A resonating chemical that may be found in everyday items such as food and supplements, materials for constructing, fabrics, detergents, plastics, cosmetics, and fragrances.

Metals

- A resonating Heavy Metal used in coinage, jewelry, or food packaging materials.

Mold

- A resonating mycotoxin that is produced by some species of molds, typically found on crops. It is

typically transmitted through inhalation.

- A resonating Mold/Fungi that grows in plant debris, soil, and decaying wood.

Parasites

- A resonating parasite often transmitted by ticks, mosquitos, or other type of insect.

Virus

- A resonating virus often transmitted through close personal contact such as shaking hands, coughing, sneezing, or touching objects that may have been touched previously by an infected individual.

Energetic Hormonal Imbalances

You were scanned to find resonating hormonal imbalances those hormones detected are listed below.

Hormones

- High Estrogen
A group of compounds named for their importance in both menstrual and reproductive cycles. They are the primary female sex hormones. Natural estrogens are steroid hormones, while some synthetic ones are non-steroidal.
- High Cortisol
A glucocortical hormone of the adrenal cortex often referred to as the stress hormone.
- Low Testosterone
A steroid hormone found in the androgen group that accelerates growth in tissues on which it acts, stimulates blood flow, and affects many metabolic activities.

- Low DHEA

A natural steroid and precursor hormone produced by the adrenal glands.

Balancing Remedies

Up until this point, we've been analyzing the current state of energetic stressors. This section will identify remedies to bring these stresses back into balance. When scanning for balancing remedies, your samples were scanned against thousands of potential remedies including herbs, homeopathics, and nutritional supplements. We take scanning a step further by making sure the full combination of remedies synergistically test well against your hair and saliva.
